

## GAT ECO.Lock 7100 NW BA

Battery-powered, robust RFID locker lock with wireless interface

### FACTS AT A GLANCE

- Clear status indication via push button position
- Timed use - automatic opening function
- Mobile version with wireless and NFC interface
- Multi-technology reader for all common RFID technologies
- Vandal-proof installation
- Intuitive and unique single-handed operation
- NFC ready
- Power supply via conventional alkaline batteries
- Various operating modes - freely-selectable locker, personal locker, or time-limited locker
- Simple retrofitting of existing lockers, no wiring, existing holes can be used
- Mechanical interlock (motor) for maximum reliability
- Configuration via PC, data carrier, or NFC (MoLA mobile app)

The RFID specialist once again proves that Gantner is a pioneer in the field of locker locking technology with the latest development of battery powered, electronic locker locks – the GAT ECO.Lock 7100 NW BA featuring a multi-technology RFID reader. As no cabling is required, it can be integrated into almost every locker with minimal installation effort. The retrofitting of existing lockers or the replacement of previously used mechanical locks is easily possible. With minimal effort, customers receive an RFID-based, electronic locker or cabinet lock that can be conveniently operated using an RFID or NFC data carrier.

Key features of the GAT ECO.Lock are its self-sufficiency and the lack of administration costs (no key management) for managing a locker system, which greatly minimizes personnel expenses and administrative costs.

The wireless interface of the lock can be used for simple configurations, the reading of bookings and the current status, and for firmware updates. The GAT ECO.Locks can be either freely selectable, permanently assigned, or even configured as rental lockers. It is also possible to define whether the user can occupy a single locker only or multiple lockers.

Thanks to the timer, an automatic opening function is possible that can be used, e.g., for cleaning at night. The intuitive operation immediately indicates via the button position which lockers are free or occupied. The sturdy lock stores the last 150 bookings and guarantees a completely reliable data transmission.

### GAT ECO.Lock 7100 NW BA

## Order information

| Description                                                                                                                                                                                       | Part No. |

## Typical application

1. GAT ECO.Lock 7xxx NW BA
2. Push button (position indicates the locking status)
3. Front label
4. Locking bolt on door inner side
5. Open locker
6. Closed locker
7. Identification with RFID data carrier
